                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
           The invention relates to a voltage-gated, pH sensitive potassium channel CC Slo3, expressed in spermatcoytes. Slo3 has, as a monomer, calculated complecular weight 120-156 kD, has unit conductance (as a functional conductance) and the conductance (as a functional contivity at intracellular pH above about 7.1 and binds specifically to polyclonal antibodies against sequences shown in AAV13437, AAV13438, and concern acrosome reaction, essential steps in fertilization. Slo3, and the concern acrosome reaction, essential steps in fertilization. Slo3, and the conclusions of contraceptives), also for studying sperm physiology in vitro. Slo3, as part of a chimera with another channel protein, can be used as a reporter for measuring changes in potassium concentration, correct flow, ion flux, etc. Fragments of Slo3 muched acid are useful as correct flow, ion flux, etc. Fragments of Slo3 muched acid are useful as correct flow, ion flux, etc. Fragments of Slo3 muched acid are useful as correct flow, ion flux, etc. Fragments of Slo3 muched acid are useful as correct flow, ion flux, etc. Fragments of Slo3 muched cacid are useful as correct flow, ion flux, etc. Fragments of Slo3 muched cacid are useful as correct flow, ion flux, etc. Fragments of Slo3 muched acid are useful as correct flow, ion flux, etc. Fragments of Slo3 muched acid are useful as correct flow, ion flow, etc. for identifying potential modulators; to localization; in gene therapy; for identifying potential modulators; to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1072
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Voltage-gated; pH sensitive; potassium channel; Slo3; spermatocyte; sperm capacitation; acrosome reaction; fertilization; infertility; contraceptive; sperm physiology; channel protein; gene therapy.

                                                                                                                                                                                            The invention relates to a variety process. Slo3, expressed in spermatocytes. Slo3 has, as a monomer, calculated slo3, expressed in spermatocytes. Slo3 has, as a monomer, calculated molecular weight 120-156 kD; has unit conductance (as a functional tetramer, when expressed in Xenopus oocytes) of 80-120 pS; has increased activity at intracellular pH above about 7.1 and blads specifically to polyclonal antibodies against sequences shown in AAY13437, AAY13438, AAY13442, and AAY13443. Slo3 is involved in sperm capacitation and/or the
acrosome reaction, essential steps in fertilization. Slo3, and the nucleic acid encoding it, are used to identify specific inhibitors at activators (potentially useful for treating infertility and as contraceptives), also for studying sperm physiology in vitro. Slo3-specific antibodies are used for diagnostic detection of Slo3 expression. Slo3, as part of a ching the with another channel protein, be used as a reporter for measuring changes in potassium concentration current flow, ion flux, etc. Fragments of Slo3 nucleic acid are useficed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Voltage-gated; pH sensitive; potassium channel; Slo3; spermatocyte; sperm capacitation; acrosome reaction; fertilization; infertility; contraceptive; sperm physiology; channel protein; gene therapy.

                         The invention relates to a voltage-gated, pH sensitive potassium channel $103, expressed in spermatocytes. $103 has, as a monomer, calculated molecular weight 120-156 kD; has unit conductance (as a functional tetramer, when expressed in Xenopus oocytes) of 80-120 pS; has increased activity at intracellular pH above about 7.1 and binds specifically to polyclonal antibodies against sequences shown in AAY13437, AAY13438, AAY13442, and AAY13443. $103 is involved in sperm capacitation and/or the acrosome reaction, essential steps in fertilization. $103, and the nucleic acid encoding it, are used to identify specific inhibitors and activators (potentially useful for treating infertility and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            measure up-regulation of Slo3 in drug screening assays and for production of recombinant Slo3 protein. The present sequence represents a human Slo3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     probes for identifying homologs, variants and mutants associated with disease; to detect Slo3- related mRNA or protein; for chromosomal localization; in gene therapy; for identifying potential modulators; to measure up-regulation of Slo3 in drug screening assays and for production
activators (potentially useful for contraceptives), also for studying

Slo3, as part of a chimera with another channel protein, can be used as a reporter for measuring changes in potassium concentration, current flow, ion flux, etc. Fragments of Slo3 nucleic acid are useful a probes for identifying homologs, variants and mutants associated with disease; to detect Slo3- related mRNA or protein; for chromosomal localization; in gene therapy; for identifying potential modulators; to measure up-regulation of Slo3 in drug screening assays and for productic of recombinant Slo3 protein.
slo3, expressed in spermatocytes. Slo3 has, as a monomer, calculated molecular weight 120-156 kD; has unit conductance (as a functional tetramer, when expressed in Xenopus occytes) of 80-120 pS; has increactivity at intracellular pH above about 7.1 and binds specifically polyclonal antibodies against sequences shown in AAY1347, AAY13438, AAY13442, and AAY13443. Slo3 is involved in sperm capacitation and/o acrosome reaction, essential steps in fertilization. Slo3, and the

$103-specific antibodies are used for diagnostic detection of $103 expression. $103, as part of a chimera with another channel protein, can be used as a reporter for measuring changes in potassium concentration, current flow, ion flux, etc. Pragments of $103 nucleic acid are useful a probes for identifying homologs, variants and mutants associated with disease; to detect $103- related mRNA or protein; for chromosomal localization; in gene therapy; for identifying potential modulators; to measure up-regulation of $103 in drug screening assays and for productio of recombinant $103 protein.
                                                                                                                                                                                                                                                                                                                                                                Key
Region
The present sequence represents a Paramecium tetraaurelia cation channel protein (CCP) that can be mutated, using recombinant DNA technology to mimic the physiological function and chemical properties of a eukaryotic CCP. The invention provides an assay

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for screening potential drugs or agents which interact with CCPs using prokaryotic CCPs (such as those given in AAY32009-12) mutated to minds a functional eukaryotic CCP (such as those given in AAY32013-22). An example of a mutated prokaryotic CCP is given in AAY32014. The crystal region of the CCP may also be used in the assay. The drugs or agents obtained can be used to treat conditions related to the function of CCP in vivo, such as cardiac arrhythmia, diabetes mellitus, seizure disorder, asthma or

This protein forms, with the protein Kv2.1, voltage-dependent potassium channels that are expressed preferentially in the myocardium and hippocampus and have high affinity for propafenone. The channels are use to identify specific modulators which are potentially useful as therapeutic agents, particularly as class IC anti-arrhythmics, but more generally agents for treating cardiovascular or nervous system diseases, e.g. antihypertensives or cardioprotectants, or for treating learning an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      memory disorders or neurodegenerative disorders such as epilepsy, ischemia, stroke, or Parkinson's or Alzheimer's diseases. Nucleic acid that encodes (I) is used for recombinant production of (I), particular to generate cells for drug screening. (I) is also used to raise specifiantibodies. This sequence represents the mouse Kv6.2 protein described the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a human cation channel protein (CCP). The invention provides an assay for screening potential drugs or agents which interact with CCPs using prokaryotic CCPs (such as those given in AAY32009-12) mutated, using recombinant DNA technology, to mimic the physiological function and chemical properties of a functional eukaryotic CCP (such as those given in AAY32013-22). An example of a mutated prokaryotic CCP is given in AAY32013-22). An example of a mutated prokaryotic CCP is given in AAY32024. The crystal region of the CCP may also be used in the assay. The drugs or agents obtained can be used to treat conditions related to the function of CCP in vivo, such as cardiac arrhythmia, diabetes mellitus, seizure disorder, asthma or hypertension. The invention has overcome the physical limitations regarding the isolation and purification of eukaryotic CCPs.

It is isolated from brain tissue and maintains the resting potential and controls the excitability of a cell. Kv6.2 polypeptide can be used to identify compounds, that modulate the ion flux through heteromeric voltage-gated potassium channels. Such modulators are used as neuroprotective agents and for treating CNS disorders, such as migraines, hearing and vision problems, psychotic disorders and selzures. It can also be used as reporter molecules in assays and to produce antibodies. Kv6.2 DNA sequence can be used to produce specific primers or probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Voltage gated potassium channel; Kw6.2; human; excitability; ion flux; resting potential; alpha subunit; modulator; hearing/vision problem; migraine; central nervous system; CNS; seizure; neuroprotective agent; psychotic disorder; reporter; treatment; detection; antibody; probe;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                 The present amino acid sequence is the human Kv6.2 variant #1 monomer, which is an alpha subunit of a heteromeric voltage-gated potassium channel. It is isolated from brain tissue and maintains the resting potential and controls the excitability of a cell. Kv6.2 polypeptide can be used to identify compounds, that modulate the ion flux through heteromeric voltage-gated potassium channels. Such modulators are used as neuroprotective agents and for treating CNS disorders, such as migraines, hearing and vision problems, psychotic disorders and seizures. It can also be used as reporter molecules in assays and to produce antibodies. Kv6.2 DNA sequence can be used to produce specific primers or probes for detection purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New voltage-gated potassium channel alpha subunit, useful identifying modulators of voltage-gated channel activity treating central nervous system disorders e.g. migraines

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     potential and controls the excitability of a cell. Kv6.2 polypeptide can be used to identify compounds, that modulate the ion flux through heteromeric voltage-gated potassium channels. Such modulators are used as neuroprotective agents and for treating CNS disorders, such as migraines, hearing and vision problems, psychotic disorders and seizures. It can also be used as reporter molecules in assays and to produce antibodies.
                                                                                     30-JUN-1999;
                                                                                                                   13-JAN-2000

It is isolated from brain tissue and maintains the resting potential and controls the excitability of a cell. Kv6.2 polypeptide can be used to identify compounds, that modulate the ion flux through heteromeric voltage-gated potassium channels. Such modulators are used as neuroprotective agents and for treating CNS disorders, such as migraines, hearing and vision problems, psychotic disorders and seizures. It can also be used as reporter molecules in assays and to produce antibodies. Kv6.2 DNA sequence can be used to produce specific primers or probes

Pred. No. is the number of results predicted by chance to l
score greater than or equal to the score of the result beli
and is derived by analysis of the total score distribution
                                                                                              11934

The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the retina tissue cDNA Library Preparation: M.B. Soares Lab Clone distribution: Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized hypothalamus library cDNA Library Preparation: M.B. Soares Lab Clone distribution: Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP cDNAs whose availability will be considered under appropriate and limited collaborative arrangements seg primer: M13 Forward
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TCTCTCCAGTGCCTTCGTGGGTCTGTCCCTTCCCTACTGTTTGTGAGCTGTTTTTGTGAA 170
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AW488159 592 bp. mRNA EST 24-FEB-2000 UI-M-BH3-ars-d-02-0-UI.sl NIH_BMAP_M_S4 Mus musculus cDNA clone UI-M-BH3-ars-d-02-0-UI 3', mRNA sequence.

polylinker; Site_1: Not I; Site_2: Ecc RI; The
NIH_BMAP_M_S4 library is a subtracted library of a series,
ultimately derived from a mixture of individually tagged
normalized libraries from ten regions of the mouse brain
(cerebellum, brain stems, olfactory bulbs, hypothalamus,
cortex, amygdala, basal ganglia, pineal gland, striatum,
hipoccampus) after a series of subtractions to reduce the
representation of cDNAs from which ESTs had already been
generated. The following serially subtracted libraries
were generated in this process: NIH_BMAP_M_S4,
NIH_BMAP_M_S3.3, NIH_BMAP_M_S3.2, NIH_BMAP_M_S3.1,
NIH_BMAP_M_S2, NIH_BMAP_M_S3.2, NIH_BMAP_M_S3.1,
NIH_BMAP_M_S3.1 clones from which 3' ESTs had been derived
was used as a driver in a hybridization with a pool of
the NIH_BMAP_M_S3.3, NIH_BMAP_M_S3.2, and NIH_BMAP_M_S3.1
libraries in the form of single-stranded circles. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /organism="Mus musculus"

                                                                                                                                                                                                                                                                                                              Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                     (http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (91147321141gb1AF129072.1), a copy-number
inducible derivative of plasmid Rl. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicillin resistance."
